

STROBE-MR items

Title and Abstract

1. Title and abstract

Introduction

2. Background

3. Objectives

Methods

4. Study design and data sources

4a. Setting

4b. Participants

4c. Measurement of genetic variants

4d. Assessment of exposure and outcome

4e. Ethical approval

5. Description of assumptions

6a. Handling of quantitative variables

6b. Handling of genetic variants

6c. MR estimator

6d. Missing data

6e. Multiple testing

7. Assessment of assumptions

8. Sensitivity analysis

9a. Software

9b. Registration

Results

10a. Participant flow

10b. Summary statistics

10c. Assessment of heterogeneity

10d. Justification for two-sample design

11a. Genetic variant and exposure/outcome

11b. Exposure and outcome

11c. Translating to absolute risk

11d. Visulization of results

12a. Assessment of assumptions

12b. Additional statistics

13a. Violations of assumptions

13b. Other sensitivity analyses

13c. Direction of causal effect

13d. Non-MR analyses

13e. Additional plots

Discussion

14. Summarizing key results

15. Limitations

16a. Meaning

16b. Mechanism

16c. Clinical relevance

17. Generalizability

Other Information

18. Funding

19. Data sharing

20. Conflicts of Interest
